Harika/Vizzess

Skills

Data Analysis and Statistical Techniques: Python, R, SQL, HTML, LaTeX, Pandas, NumPy

Analytics & Visualization: Excel(Solver, Pivot Tables, Power Query), Tableau, Power BI, Lucidchart, Matplotlib, Seaborn, AMPL, Visio, Jira, sharepoint

Cloud & Big data tools: AWS, GCP, Azure, Spark, Hadoop, MLOP's, CI/CD

Machine Learning & Statistical Techniques: Lasso/Ridge Regression, PyTorch, KNN, Feature Engineering, Scikit-learn, Tensorflow, XGBoost, Forecasting, Hypothesis Testing

Professional Experience

Data scientist - CVS | Texas, USA Nov 2025 – Mar 2026

- Developed a Machine Learning model to automate the extraction of line-item summaries and total amounts from receipts, transitioning the workflow from a 100% manual process to a fully automated system.
- Empowered the Accounts Payable team to audit 100% of invoices, significantly increasing throughput and reducing manual data entry errors.
- Delivered a scalable solution that improved data accuracy and allowed the finance team to focus on high-level strategic analysis rather than administrative tasks.

Associate Analyst- Delta Technologies and Management | May 2022 – Mar 2023
Hyderabad, India

- Utilized SQL and Pandas to clean and transform large datasets, boosting reporting accuracy and enabling insightful performance metrics.
- Collaborated across teams to implement UI enhancements based on data insights, showcasing data-driven decision-making.
- Automated data cleaning via VBA Macros in Excel, reducing manual processing time by 20%, aligning with MLOps efficiency principles.

Business Analyst - 360DigiTMG | Hyderabad, India June 2021 – May 2022

- Built machine learning models (Random Forest, Logistic Regression) using Scikit-learn to forecast customer engagement with 90% precision.
- Processed 10M+ records using Python and SQL, preparing data for advanced analytics.
- Delivered interactive visualizations via Tableau and power BI translating findings into actionable marketing strategies.

Projects

Optimized Airbnb Bookings - UMD, College park Mar 2024 - May 2024

- Conducted EDA on 50+ listing features using R, cleaning and preprocessing data to improve model input quality by 30%.
- Built and compared six ML models (Random Forest, XGBoost, Lasso, Ridge, Logistic Regression, Linear Model), optimizing AUC to identify the best performing algorithm.
- Forecasted high-rating listings with 85% precision, improving pricing strategies and guest satisfaction.

Terp Tracker - UMD, College Park Nov 2023 - Dec 2023

- Leveraged 900GB of sports data using MySQL to extract KPIs for strategic decision-making.
- Built visual dashboards and reports using Tableau, Power BI highlighting team performance trends.
- Created analytics pipeline with Lucidchart and Excel, enabling 15% improvement in game planning.

Music Recommendation System - UMD, College Park Oct 2023 - Nov 2023

- Created a music recommendation engine using Python, Scikit-learn, and Spotify data for 5,000+ users.
- Improved recommendation accuracy by 20% via preprocessing, scaling, and feature engineering.
- Visualized model performance using Matplotlib, seaborn aligning with user satisfaction goals.

Education

St. Francis College, Master of Science in Business Analytics

- GPA: 3.6/4.0
- **Coursework:** Data Mining, Machine Learning, Predictive Analytics, Data Visualization, Data Models.
